

A reusable face mask made from double-layered EVOLON®, with elasticated ear straps for easy attachment. For maximum effectiveness, we recommend you wash before use.

EVOLON® fabrics are produced with a microfilament structure. This unique manufacturing process allows it to be breathable and friendly on the skin, whilst proving an effective physical barrier against allergens. This protection is permanent, even after many washes.

Free from coatings and chemical additives, EVOLON® has been certified by renowned independent institutes, such as the European Center for Allergy Research Foundation (ECARF).

EVOLON® is widely used in the medical, care, work-wear, bedding, cosmetics and food industries.

The elasticated straps are made from 94% PES and 6% natural rubber, with a width of 7mm and an elasticity of 140%.
